

Application Developer (internship)

1. Internship description

In this internship you will be part of the radio network team of Tango, the leading alternative mobile operator in Luxembourg. You will support the development of the main knowledge management database (Cell Database) of the team. This consists in developing a Java EE application with a MySQL-Database. The design of business processes with BPMN / BPEL will also be part of your task. You will be involved in the whole development process; from the application design to implementation and testing. During the 3 to 6 months you work at Tango we offer you the possibility to enhance your skills in software development, database design and process optimization in a challenging environment. This opportunity combines the world of the telecom business with business application development.

2. What we expect from you

- Studying informatics or business information systems.
- Strong skills in software development (especially java)
- Knowledge of BPMN / BPEL
- Knowledge of Java Application Servers (JBoss)
- Knowledge of relational databases (MySQL)
- Understanding of mobile telecommunication systems is considered as an advantage.
- Languages: German or French. English is a must.

3. What you can expect from Tango

- Working in a flexible environment
- Being supported by experienced co-workers
- Freedom to express your opinions and ideas

4. Application
